Education

Sardar Patel Institute of Technology, Mumbai

Bachelor of Technology in Computer Engineering | CGPA: 7.79

Minor in Internet of Things (IoT)

2023 – 2027

Mumbai, Maharashtra

Experience

Full Stack Developer Intern

Jan 2026 – Apr 2026

B2World (BTOW Pvt. Ltd.) [Certificate](#)

- Built a **Content Management System (CMS)** using **React.js**, **Node.js**, and **MongoDB**, enabling centralized management of portfolios, blogs, media assets, SEO metadata, and website content through an admin dashboard.
- Developed a full-stack **ATS Resume Builder** featuring ATS scoring, job-description keyword extraction, resume-job matching, skill-gap analysis, and automated PDF resume generation.
- Enhanced the existing **chatroom system** by implementing **one-to-one candidate messaging**, extending **group conversations**, and developing **admin monitoring features** for communication oversight.

Projects

Ledger System | *Java, Spring Boot, PostgreSQL, Apache Kafka, Docker, GitHub Actions* [🔗](#)

Jun 2026

- Architected a distributed financial platform comprising a **Ledger API**, **Fraud Detection Service**, and **Reconciliation Worker** using **Spring Boot** microservices, implementing idempotent transaction processing, deterministic lock ordering, and concurrency-safe balance updates.
- Designed a fault-tolerant **Reconciliation Worker** using the **Transactional Outbox Pattern**, enabling reliable **Apache Kafka** event delivery and **eventual consistency** across distributed financial workflows.
- Automated **CI/CD** pipelines using **GitHub Actions**, **Docker**, and **Testcontainers**, enabling reliable integration testing and containerized deployment across all microservices.

BuyEasy | *React, Node.js, Express, MongoDB, RabbitMQ, Redis, Docker, Jenkins, AWS EC2* [🔗](#)

Apr 2026

- Engineered an asynchronous order-processing pipeline using **RabbitMQ**, decoupling inventory updates and email notifications from the order API while enabling fault-tolerant message processing.
- Implemented a **Redis** cache-aside layer for cart operations with TTL-based expiration and cache invalidation on updates, reducing database load; built a scheduled price-alert service using **Node-Cron** and **Nodemailer** to notify users of product price drops.
- Deployed a containerized MERN application on **AWS EC2** using **Docker Compose**; automated **CI/CD** with **Jenkins**, **SonarQube**, and **Jest/Supertest**, and implemented **Prometheus-Grafana** monitoring for application observability.

HireLens | *React.js, Node.js, Express.js, MongoDB, Redis, Google Gemini API, JWT* [🔗](#)

Jan 2026

- Architected an AI-powered ATS platform with modular **REST APIs** for resume parsing, semantic matching, ATS scoring, and interview preparation, secured via **JWT** authentication and **role-based access control**.
- Engineered a hybrid ATS scoring engine combining **keyword matching**, **semantic similarity**, **skill-gap analysis**, **action-verb detection**, and **formatting evaluation** to produce a deterministic 0–100 score, with a PDF parsing pipeline using regex extraction and **Google Gemini API** fallback.
- Optimized backend performance using **Redis** caching for ATS reports, semantic embeddings, and Gemini API responses, reducing redundant database queries and external API calls by up to **16×**.

Skills

Languages: Java, Python, SQL, JavaScript, C

Frameworks & APIs: HTML, CSS, React.js, Spring Boot, Node.js, Express.js

Databases & Messaging: PostgreSQL, MongoDB, Redis, Apache Kafka, RabbitMQ

Developer Tools: Git, GitHub, Docker, Postman

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Distributed Systems

Leadership & Volunteer Experience

- **Committee Member, FACE** – Assisted in organizing technical events and student activities at SPIT.
- **Volunteer, Abhyudaya (SPJIMR)** – Mentored school students through community outreach initiatives.
